

HOW TO USE STIOLTO RESPIMAT

Better breathing is within reach with STIOLTO RESPIMAT

We know COPD makes it hard to catch your breath. That's why STIOLTO RESPIMAT (tiotropium bromide and olodaterol) is available in the STIOLTO RESPIMAT inhaler. It delivers the 2 medicines you need in a slow-moving mist to help you inhale it. Without chemical propellants, powders, or steroids. **2 puffs, once a day, can help improve your breathing all day and night.**

As with all medicines, take STIOLTO only as prescribed by your doctor.

Using the STIOLTO RESPIMAT inhaler for daily dosing

After preparing and priming the inhaler, patients can remember the steps for daily use with "T.O.P.":

Turn: the clear base

Open: the green cap and close your lips around the mouthpiece

Press: the dose-release button and inhale the mist
