

# COVID Analgo-sedation Algorithm (Bundled Care PPE Preservation Model)

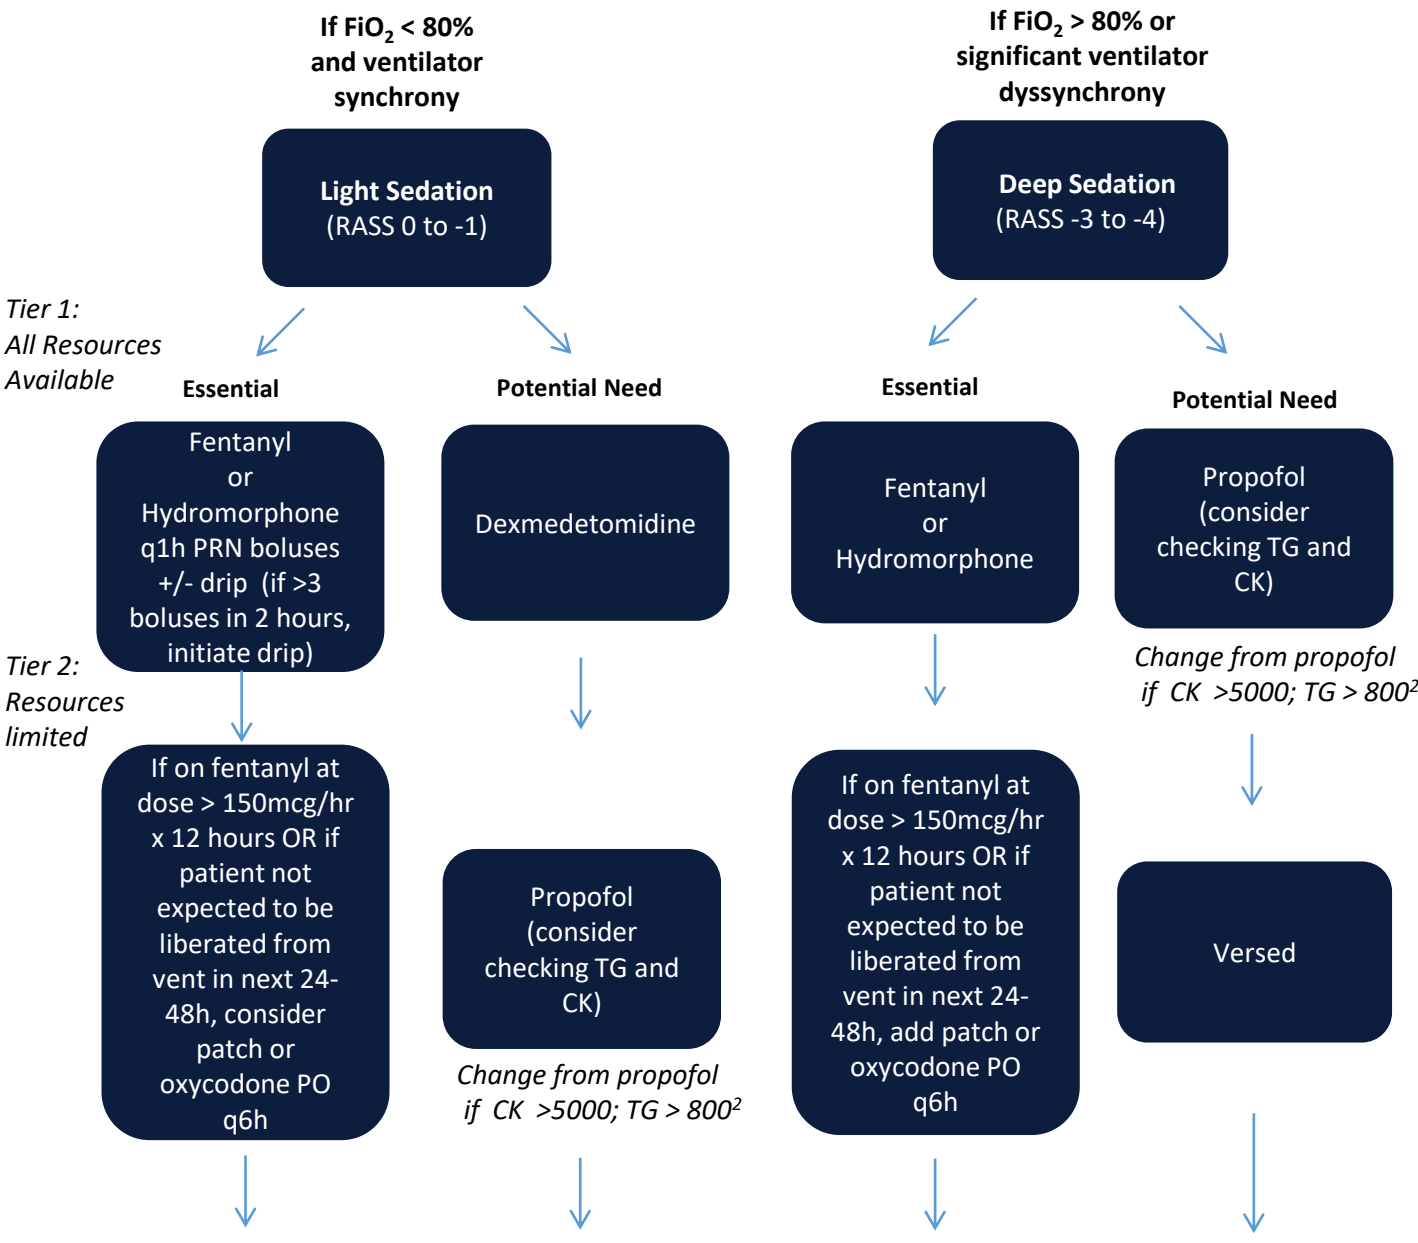

Note: Opioids should be initiated prior to sedatives as recommended per the 2018 SCCM PADIS Guidelines<sup>1</sup>

## Under cohorted TEAM bundled care model:

\*SAT with linked SBT should be performed immediately upon transfer out of cohorted unit to non-COVID ICU

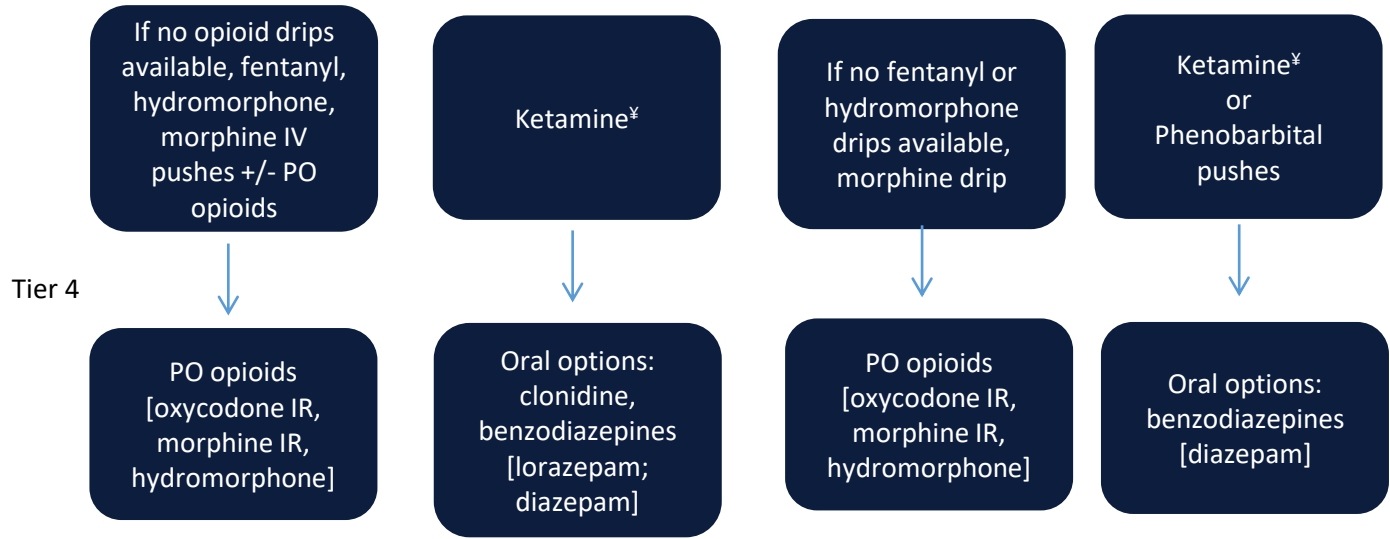

\*If RASS change to -1 from deep sedation, AM SAT should be modified by reducing fentanyl infusion by 50% Combined with cessation of propofol

\*If Deep Sedation is required, AM reduction of each infusion by 50% should be performed

**Tier 3 & 4 recommendations are reserved for when above resources are unavailable**

**Tier 3: Crisis Standards**

¥Less literature to support the use; monitor closely for delirium in patients on ketamine

\*\*Consider patient's baseline medications (especially if neuropathic pain present—add gabapentin, etc)

\*\*Consider scheduled acetaminophen for fevers/pain if not contraindicated
